

AMD Track 1 Local-First Token Router

A Dockerized benchmark agent for AMD Developer Hackathon Act II Track 1.

Problem

Track 1 ranks submissions by lowest recorded Fireworks token usage after passing the accuracy gate.

The agent must:

- Stay compliant with the contest contract
- Read `/input/tasks.json`
- Write valid `/output/results.json`
- Minimize remote token consumption

Solution

Deterministic-first + Fireworks rescue architecture

- Local deterministic tools when correctness is provable
- Input validation and output verification before acceptance
- Fireworks AI rescue only when model inference is required
- Remote calls routed exclusively through FIREWORKS_BASE_URL
- Model selection restricted to ALLOWED_MODELS at runtime

Submission Artifact

Image:

ghcr.io/itz1508/amd-track1:latest

Digest:

ghcr.io/itz1508/amd-track1@sha256:330144fa6ed285a5087757d8ba2710d7ae8cb04
ed044c07c7f7548bcb80a7083

Status:

- linux/amd64
- Public GHCR pull verified
- Minimized image (~46 MB)
- No bundled secrets
- Valid /input -> /output smoke test passed
